

# DIGITAL TV LABS

## DLNA

### DLNA Interoperability Testing

Digital TV Labs offers a complete consultative package for DLNA testing and is a DLNA accredited Independent Certification Vendor (ICV). Services include pre-testing, media capabilities verification, conformance testing, interoperability testing, auto IP or small network testing and link protection testing.

- DLNA Accredited Independent Certification Vendor (ICV)
- DLNA Certification
- DLNA Pre-Testing
- DLNA Hosting

### Getting Certified

#### What is DLNA Testing / Certification

DLNA testing for conformance & certification to DLNA guidelines entails several different forms of testing. There is no single "DLNA Test" but rather a suite of several testing processes spanning many different types of testing. Each of these test types must be run and passed for a DLNA certificate to be issued.

Tests we offer:

- Testing for all certifiable classes and capabilities
- Pre-Testing & Re-testing
- Testing for all capabilities
- Software Testing
- Hosting

How to become certified:

- Customer must be a DLNA member
- Customer must meet pre-requisites
- Customer must pass DLNA Accredited ICV testing

Certification Pre-requisites :

Certification from other organisations is required for devices supporting certain functionalities such as:

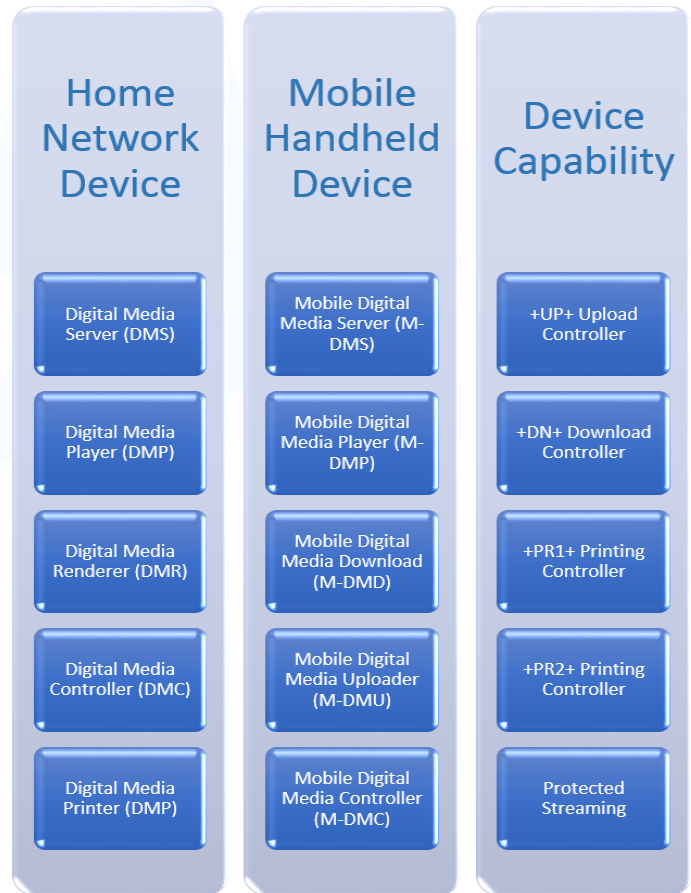

- UPnP / MoCA / HomePNA / WiFi

These certifications may be obtained concurrently with DLNA certification; they are only needed once DLNA certification is completed.

### Why Digital TV Labs

- Quality of service
- Expertise developed by contributing to the official DLNA test materials
- Technical knowledge gained from unrivalled experience in developing test tools for the CE industry
- A consultative approach individually designed for each customer

### Classes and Capabilities

### About Digital TV Labs

Digital TV Labs is a leading media and device testing specialist operating globally. Its extensive portfolio of products and services provide testing solutions to CE manufacturers, broadcasters, operators and related media and device supply chains as well as bespoke interoperability, conformance and certification testing for standards and operator regimes.
